PROJECTS

Ampact – E-learning & Community Platform - **Summer 2021**   **GitHub**
- Lead a 6-person 2-month Agile development project for the African Impact Initiative that helps aspiring entrepreneurs in Africa to network, build their business and get fundraising.
- Developed Ampact using MERN web stack and followed strict Agile methodologies. Technologies: React, Bootstrap, ExpressJs, NodeJs, MongoDB

Java Unix Shell – Java based Unix Shell – **Spring 2021**   **GitHub**
- Collaborated with two team members using SVN/Git to develop a Unix shell. We strictly followed the Agile software development methodologies completing Scrum meetings and creating product backlogs.
- Developed a java based Unix shell using advanced object-oriented concepts and smart use of java design patterns.

Javmos – Java based Graphing Calculator   **GitHub**
- Designed a code architecture that makes use of inheritance and object-oriented programming to optimize readability and prevent repetitive code.
- Developed a user-driven java application that can graph polynomial, trigonometric and transcendental functions including roots, asymptotes, inflection points and critical points displayed on a java swing GUI.

WORK EXPERIENCE

Togpetwear

Toronto, ON Shopify Web Developer

Summer 2021
- Customized Shopify theme using HTML, CSS & Liquid to increase customer conversions and to have a professional aesthetic.
- Connected Shopify site to google analytics, Facebook business manager ads and added upsells on product pages. Additionally set up Togpetwear to sell on Amazon.
